

Jamcracker Cloud Brokerage and Cloud Management Solutions

Jamcracker provides comprehensive cloud management and brokerage solutions. Avail Jamcracker's Cloud Brokerage Appliance and software to provision, bill and support public clouds and 3rd party ISV products. Explore and benefit from the easily configurable Jamcracker Virtual Cloud Management Appliances and streamline the management and governance of your cloud

Jamcracker is the world's leading provider of cloud brokerage and management solutions. The Jamcracker cloud solutions focus on improving the cloud implementation strategy, cloud life cycle management and operational excellence across enterprises and service providers. These solutions are offered in different packages that range from basic cloud cost management to more advanced and comprehensive multi-cloud management and cloud service brokerage solutions.

How these solutions work, and why they are different?

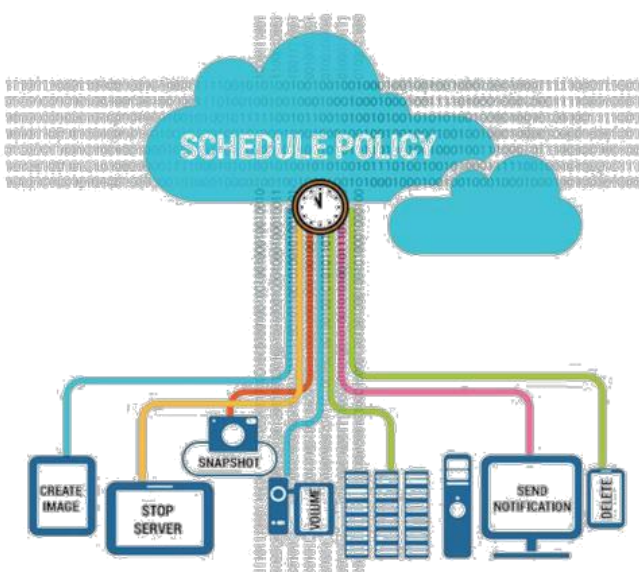

Jamcracker cloud management solutions go beyond basic multi-cloud management and address various challenges organizations face in the cloud adoption journey.

Delivered in easy to install and manage virtual appliances that can be easily upgraded from one package to the next, they provide a complete cloud brokerage and cloud management solution portfolio. Based on your business model and role as a business user, IT administrator, channel partner (VAR, SI or DMR) or service provider (Telco or MSP), choose the most strategic option from the range Cloud Brokerage and Cloud management solutions. Unlike SaaS offerings available in the market, these packages provide peace of mind in terms of data privacy and customer account confidentiality and can be installed in public (AWS, Microsoft Azure, Google Cloud, IBM Bluemix) or private clouds (VMware vCenter, OpenStack, Microsoft Azure Pack) environments.

Jamcracker Cloud Analytics: This solution is targeted to the business unit users and provides visibility into cloud costs across an enterprise organization. Further, it empowers business and IT managers to streamline and optimize cloud costs. It offers interactive dashboards that let you view cloud costs across your organization at various levels. Cloud Analytics provides reliable cost data so that IT can make confident spending decisions. The aggregate cost of consuming cloud resources is sliced and diced across multiple dimensions, and displayed in a way that helps decision makers to determine if the cloud costs align with business goals. In addition to the consolidated view, cloud usage per segment is displayed at a granular level. You can use tag-based resource policy and track costs by, for example, projects, departments, products, or business units.

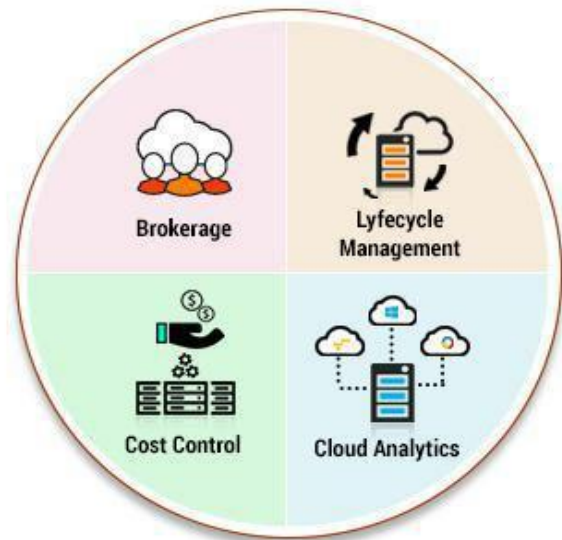

Jamcracker Hybrid Cloud Management: This package is beneficial to the IT operations and DevOps practice managers. This virtual appliance can be hosted either in the public or in private cloud environments and supports installer for AWS, Azure as well as vmware virtualized cloud environments. With Jamcracker Hybrid Cloud Management, IT can manage multi-cloud and hybrid cloud deployments including Amazon AWS, Microsoft Azure, Google Cloud Platform, IBM Bluemix, VMWare vSphere, OpenStack and Azure Pack. This solution can be easily integrated to support enterprise directory services including Active Directory, and Active Directory Federation Service. Channel partners such as a SIs or VARs can further use APIs for integration with other 3rd private clouds and billing systems.

Jamcracker CSB Standard: The CSB Standard appliance is a purpose built appliance for Microsoft CSP partners, automates order management, provisioning, billing, and support for Microsoft Office 365 and Azure with relative ease. The solution also provides APIs to integrate in house IT systems. This solution supports self-service features for your end customers, as well as analytics dashboards. Microsoft CSP partners can also resell Jamcracker Cloud management appliances to help end customer manage multi-cloud environments, providing additional up-sell opportunities and build customer loyalty.

Jamcracker CSB for Service Providers: Jamcracker's flagship Cloud Services Brokerage solution is beneficial to service providers including telcos, managed services providers and solutions integrators to offer cloud brokerage services to enterprise end users. JSDN is available as licensed software that can be hosted either in public or private cloud environments. Service providers can manage multi-cloud and hybrid cloud deployments including Amazon AWS, Microsoft Azure, Google Cloud Platform, IBM Bluemix, VMWare vSphere, OpenStack, and Azure Pack. This solution can be easily integrated to support enterprise ITSM, billing, ERP and identity systems including Active Directory and Active Directory Federation Service. Channel partners such as a SIs or VARs can further use APIs for integration with other 3rd party private clouds and billing systems.
